

BC Series BC 410 / HERMES

Blood Donation Chair

Features

HERMES BC 410

The blood collection chair has been produced with the thought of the comfortable sitting of the person who will use it, and it has been tested completely user-oriented.

Electric blood collection chair, which consists of three sections, is nurse-friendly with its comfortable armrest in addition to providing optimal stabilization during intervention.

Thanks to its unique design structure, it is an indispensable assistant for performing intervention operations with its light alloy used without sacrificing ease of use and durability in production.

Four motorized structure is designed for easy use, back, leg rest, trendelenburg adjustments made by hand remote control. Armrests are adjustable up and down. Our R&D studies provide a hygienic application area adapted to maximize the sterilization of the product. It has a special surface area that reduces the possibility of infection to zero.

It is painted with electrostatic powder paint at 180 ° degrees.

The seat, which can be moved to any place with its ease of mobility, has four completely antistatic wheels, two of them with brakes.

Description

Height adjustable

Easy to clean waterproof vinex leather over high density sponge on the lying surface.
