

STRETCHER

ST 02 VENTUS

ST 02 VENTUS Stretcher

Description

With user & consumer oriented design the emergency stretcher has a fixed height with back rest adjustment, comfortable upper upholstery and a protective barrier.

The ST 02 VENTUS model stretcher meets at the basic level first aid, mobilization and transfer operations. It provides ease of use to the patient with safe side barriers, and to the healthcare worker with push / pull bars. Thanks to its separable upper platform, ST 02 VENTUS can be used in extreme sports conditions and war zones, i.e. on sloped and natural grounds. At the same time, this feature facilitates the transfer of the patient to another stretcher or bed. And it also facilitates the removal of the patient from the ground surface where they are located.

Stretcher ST 02 VENTUS provides patient safety at the highest level thanks to its seat belts, while its steel construction, lower trolley and 125 mm 360 degrees swivel castors with two brakes can be used in professional areas and artificial floors.

ST 02 VENTUS In cases where the patient's head should be kept high during first aid, the (pneumatic) adjustable back section provides a vital and basic function.

It has the feature of Trendelenburg location with its aesthetic and practical controlled pneumatic system.
